Subject: Fuel

Dear Mr. Gunnerman,

Upon commencement of the construction of the Peru Heights refining facility F and P construction agreed to run ARC blended fuel in the equipment to be used onsite. Our first consideration of this was with trepidation. This was due to many variations in mixtures obtained through the use of Bio Diesel through other local distributors, the inconsistency in their product formulas built cause for worry due to the high cost of necessary maintenance post use.

During the continuing operation of the equipment during this project, it has been noted that cold morning startups using Blended ARC fuel has helped significantly. The equipment starts up in cold weather very easily, also the engines are running much cleaner than before, Soot levels in oil can analysis are registering notable lower ppm levels. Greater horsepower, and engine rpm response have been noted by the operators.

We at F and P construction continually strive to find, and use cutting edge technology to advance our goals. When considering what fuel to run, there is no consideration, your product is superior.

F and P construction is looking forward to a long term relationship with Advanced Refining Concepts.

Sincerely,

Mike Tiede
